

Mohanad Kalloub

Full-Stack Software Engineer

kalloubmohanad1@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | +972-595372607

SUMMARY

Full-Stack Engineer with +4 years of experience owning production web and mobile applications end to end – architecture, implementation, testing, deployment, and ongoing improvement. Strong across the stack: Next.js on the frontend and REST API design in both Python (FastAPI) and Node.js (Express, NestJS), type-safe data access with Prisma over PostgreSQL, secure authentication and session management, real-time features over WebSockets, asynchronous and event-driven processing with Celery and RabbitMQ, and containerised deployment on Docker with GitHub Actions CI/CD to AWS. Delivered for international clients across the UK and Europe, including payment, subscription, and dashboard systems. Comfortable in fast-moving, early-stage environments where priorities shift and ownership matters more than process. Fully equipped for remote work with independent solar power and internet ensuring 24/7 availability; payments handled through RemotePass, so onboarding and invoicing run exactly like any EU or US-based contractor.

SKILLS

- **Frontend:** React, Next.js, Angular, React Native, Expo, TypeScript, JavaScript, Redux Toolkit, React Query, Tailwind CSS, Material UI
- **Backend & APIs:** Python (FastAPI), Node.js, Express.js, NestJS – REST API design, modular architecture, dependency injection, authentication & authorization, role-based access, secure session management
- **Async & Messaging:** Celery, RabbitMQ, message queues, event-driven architecture, background job processing, WebSockets & real-time services
- **Databases & ORMs:** PostgreSQL, MongoDB – schema design, queries, migrations, data-access patterns; Prisma (schema modelling, migrations, type-safe queries)
- **DevOps & Cloud:** Docker, GitHub Actions CI/CD, AWS (S3, CloudFront), Linux, DNS, HTTPS/SSL, production troubleshooting
- **Testing & Quality:** Jest, Cypress – unit, integration, and end-to-end testing; code review and version control (Git, GitHub)
- **Integrations:** Stripe, PayPal, JawwalPay, PalPay – subscription checkout and multi-provider payment flows
- **AI Services:** OpenAI and Anthropic APIs – integrating LLM services into application workflows
- **Tooling:** Claude Code, Cursor, GitHub Copilot, Jira, Figma
- **Languages:** Arabic (native) · English (Fluent)

EXPERIENCE

Full Stack Developer (NestJS) – [Taskly](#)

Jan 2026 – Aug 2026

- Building a full-stack task management platform end to end for a client using Next.js, NestJS, and PostgreSQL, owning features from architecture through deployment with a focus on clean, modular architecture and reusable components.
- Designed and implemented a secure authentication system – signup/login, secure session handling, and a complete forgot-password and reset flow.
- Built RESTful APIs with NestJS using modular architecture and dependency injection, with Prisma for schema modelling, migrations, and type-safe database access.
- Set up GitHub Actions pipelines for automated testing, build, and deployment to a Dockerised production environment.

Full Stack Developer (React Native) – [Be Home App](#)

Jul 2025 – Dec 2025

- Enabled real-time data synchronisation across clients using WebSockets and Firebase, significantly increasing engagement.
- Spearheaded development of 20+ mobile screens, improving scalability and user experience.
- Improved application performance by 30% through Redux Toolkit and component-level optimisations, raising maintainability.

Freelance Full Stack Developer (Node.js) – [Real Estate Platform](#)

Jan 2024 – May 2025

- Built scalable Next.js applications, reducing page load times by 25% and increasing organic traffic by 15%.
- Developed reusable UI component libraries, improving development efficiency by 30% across the codebase.

Frontend Engineer (React & React Native) – [Dash.ps](#)

May 2023 – Oct 2023

- Developed 30+ screens and core features across web and mobile – user authentication, admin and user dashboards, forms, and real-time data updates.
- Improved the subscription checkout flow with multi-provider payment gateway integration (Stripe, PayPal, JawwalPay, PalPay), increasing successful transactions and overall conversion.

Freelance Frontend Engineer – [Book Store Platform](#)

May 2022 – Apr 2023

- Developed 25+ responsive screens and reusable UI components in React and TypeScript, ensuring type safety and reducing UI bugs across the codebase.
- Managed complex application state with Redux Toolkit, improving data consistency across product listings, cart, and user sessions while reducing unnecessary re-renders.

EDUCATION

B.Sc. Information Technology - Islamic University of Gaza

Sep 2020 – July 2024
